PROFESSIONAL SUMMARY

DevOps and Site Reliability Engineer with 3.8 years of experience in building and managing CI/CD pipelines, cloud infrastructure, and reliable production systems. I have hands-on experience with Jenkins, GitHub Actions, Docker, and Kubernetes, working across both AWS and Azure environments and helped automate deployments, improve release speed, and reduce production issues by building stable and scalable platforms. My experience includes managing containerized applications on AKS and EKS, setting up monitoring with Prometheus, Grafana and improving system reliability through automation and faster incident response. I also have experience with DevSecOps practices, container security, and infrastructure automation to build secure and efficient delivery pipelines.

PROFESSIONAL EXPERIENCE

Company Name: Wipro Technologies

2021-2025

Project Name: Wipro Gallagher Solutions

Role: DevOps Engineer

Key Responsibilities & Achievements:

- **CI/CD Automation:**
 - Designed and managed hybrid CI/CD pipelines using **Jenkins** and **GitHub CI/CD**, integrated with **SonarQube** for static code analysis.
 - Reduced deployment cycle time by **35%** and improved code quality by **30%** by implementing automated testing, quality gates, and artifact versioning.
- **Cloud Infrastructure (Azure & AWS):**
 - Provisioned and managed multi-cloud infrastructure using **Terraform** across **Azure (AKS, ACR, Key Vault)** and **AWS (EKS, ECR, S3, Lambda Functions and IAM)**
 - Built Azure Functions workflows automating repetitive operational tasks, reducing manual effort by 40% and saving in cloud costs
 - Provisioned Azure infrastructure using Terraform with drift detection.
- **Containerization & Kubernetes:**
 - Automated Kubernetes deployments using Argo CD, enabling declarative, GitOps-driven workflows for multi-cluster environments.
 - Enabled zero-downtime releases on Azure AKS using Argo Rollouts with canary and blue-green strategies, cutting rollback time by 60% and improving release confidence.
 - Modernized legacy workflows by implementing GitOps-based DevOps, enabling automated and scalable multi-environment deployments.

- **Monitoring & Observability:**
 - Set up **Prometheus** and **Grafana** for metrics collection and performance dashboards, enabling early anomaly detection.
 - Implemented end-to-end observability by configuring Prometheus to collect metrics from Kubernetes clusters and EC2. Visualized key performance using Grafana dashboards for monitoring and alerting.
 - Deployed **ELK Stack (Elasticsearch, Logstash, Kibana)** to centralize application and Configured Fluent Bit and Elasticsearch within the EFK stack to ingest, process, and centralize container logs from Kubernetes pods, enabling real-time log analysis and alerting through Kibana dashboards.
 - **Security & Compliance:**
 - Integrated Sonarqube and Trivy into CI pipelines, reducing high-severity Docker vulnerabilities by 90% before reaching production.
 - Managed secrets and credentials in **Azure Key Vault** and **AWS Secrets Manager** enforcing least-privilege access controls.
-

SKILLS & TOOLS

- **Cloud:** Azure and AWS.
 - **CI/CD & DevSecOps:** Jenkins CI/CD, GitHub Actions, ArgoCD, Azure DevOps, SonarQube Git Secrets.
 - **Security:** Trivy, Vault, SAST/SCA, Secret Scanning
 - **Containers & Orchestration:** Docker, Kubernetes (AKS, EKS)
 - **IaC & Automation:** Terraform, Bash, Python (basics)
 - **Monitoring & Logging:** Prometheus, Grafana, ELK Stack
 - **Collaboration & Tools:** Jira, Git, GitHub, VS Code
 - **OS:** Linux (Ubuntu), Windows
-

EDUCATION

Bachelor of Science

At AndhraUniversity, Andhra Pradesh

Graduated: September 2021
