PROFESSIONAL SUMMARY

DevOps Engineer and Site Reliability Engineer with nearly 4 years of experience at Wipro Technologies, specializing in CI/CD pipeline automation, multi-cloud infrastructure (AWS and Azure), Kubernetes-based container orchestration, and AI-powered SRE automation. Proven track record of reducing deployment cycle time by 35%, cutting rollback time by 60%. Hands-on expertise with Jenkins, GitHub Actions, Docker, Kubernetes, Argo CD, Argo Rollouts, Terraform, Prometheus, Grafana, and ELK Stack. Experienced in DevSecOps practices using Trivy, SonarQube, HashiCorp Vault, and Git Secrets. Pioneered LLM-integrated SRE workflows using n8n, Claude/OpenAI APIs to automate incident triage, root-cause analysis, and pipeline debugging — reducing MTTR and on-call overhead at scale.

TECHNICAL SKILLS

Cloud Platforms: AWS (EKS, EC2, IAM, VPC, Lambda, S3, CloudWatch), Azure (AKS, ACR, Azure Functions, Azure DevOps)

CI/CD Tools: Jenkins, GitHub Actions, Azure DevOps

Containerization & Orchestration: Docker, Kubernetes, Argo CD, Argo Rollouts

Infrastructure as Code: Terraform (multi-cloud), reusable module design, drift detection

Monitoring & Observability: Prometheus, Grafana, EFK stack, Jaeger.

Security & DevSecOps: Trivy, SonarQube, Jenkins credentials plugin, Azure Key Vault, AWS Secrets.

AI & Automation: n8n workflow automation, LLM integration (OpenAI) Jenkins failed pipeline, Python automation in Azure Functions.

Miscellaneous: MobaXterm, WinSCP, VS Code, Linux servers.

WORK EXPERIENCE

Wipro Technologies | DevOps Engineer

May 2021 – Apr 2025

CI/CD Pipeline Automation

- Designed and managed CI/CD pipelines using Jenkins integrated with SonarQube for static code analysis. Improved code quality by 30% implementing automated testing, quality gates and reduced deployment cycle time by 35%.
- Designed an n8n-based workflow to analyze failed Jenkins pipeline logs using OpenAI API and suggest actionable fix steps — cutting debugging time by ~30%.
- Automated Windows application deployments by generating MSI installers in Jenkins and remotely deploying them to Windows VMs via Jenkins agents, reducing manual deployment effort.
- Migrated application deployments to Linux by redesigning the deployment process using Jenkins, package-based artifact distribution, deployment to /opt/Netoxygen, and Linux service management.

Cloud Infrastructure — AWS & Azure

- Developed an event-driven post-build automation framework using **AzureFunctions (Python)**, triggered from Jenkins pipelines to automate AzureBoards workitem updates, Outlook email notifications, Microsoft Teams deployment alerts, reducing manual effort by 40%.
- Led cost optimization initiatives involving rightsizing, automation, and resource governance to improve cost efficiency.
- Provisioned and managed multi-cloud infrastructure using Terraform across AWS (EKS, ECR, S3, Lambda IAM) and Azure (AKS, ACR, Virtual machines).

Containerization & Kubernetes Orchestration

- Automated Kubernetes deployments using Argo CD, enabling declarative GitOps-driven workflows for multi-cluster environments.
- Enabled zero-downtime releases on Azure AKS using Argo Rollouts with canary and blue-green deployment strategies, cutting rollback time by 60% and improving release confidence.
- Modernized legacy workflows by implementing GitOps-based DevOps practices, enabling automated and scalable multi-environment deployments.

Monitoring, Observability & Logging

- Configured Prometheus to collect metrics from Kubernetes clusters and EC2 Linux instances; built Grafana dashboards for real-time monitoring and alerting, enabling early anomaly detection.
- Deployed ELK Stack (Elasticsearch, Logstash, Kibana) with Fluent Bit to centralize container logs from Kubernetes pods, enabling real-time log analysis and Kibana alerting.

Security & DevSecOps

- Integrated SonarQube and Trivy into CI pipelines, reducing high-severity Docker image vulnerabilities by 90% before reaching production environments.
- Enforced container security best practices and secrets management across all pipeline stages using Git Secrets and Vault.

AI & LLM-POWERED AUTOMATION

AI-Assisted Jenkins Pipeline Failure Analysis:

- Developed an AI-powered Jenkins troubleshooting workflow using **n8n** integrated with **OpenAI/Claude APIs** to automatically analyze failed pipeline logs, identify probable root causes, and recommend remediation steps, reducing manual debugging effort by **30–40%**, reducing Mean Time to Repair (MTTR)

AI-Generated Pipeline Summaries

- Automated generation of human-readable CI/CD execution summaries from Jenkins build logs, highlighting failed stages, test failures, security scan results, and deployment outcomes, then posting reports to Teams and Outlook
- **RCA Summarization:** Built an n8n automation pipeline that feeds Prometheus alerts into an LLM to generate root-cause analysis summaries and post them directly to teams channels, reducing on-call response overhead.

EDUCATION

Bachelor of Science, Computer Science | Andhra University, Andhra Pradesh | Sep 2021
